

## Addendum Pages for the Hubbard Nails

1" aluminum. C 1945. User and use unknown. May have come from the Pennsylvania area of the country. Should be put in box # 551 on Page 103 and entered as C 1945 Unknown on Page 92.

These nails are from Home Light & Power - Greeley, Co. Please add these to the Set shown on Page 143. (Thanks to Skip Kilpatrick for this update).

The next is rather tricky. It is the addition of a "SET", which calls for the elimination of one of the blocks and a ID tag to be put in another. So in the Small Aluminum section cover over box #521 and in box #520 put the following note: Alton Light & Power - Alton (IL) SEE SET. The next page is that set and the page should be placed after the existing page 119. Hope that makes sense?

Add these two small aluminum Atlantic Municipal Light & Power (Atlanta, IA) to the list on Pg. 91 as #524 and #525 and also add the photos to corresponding boxes on Page 102.

Two small aluminum numbers. The 50 is a variation and should be added to Pg. 117. The 60 should be added to Pg. 118. Users are unknown at this time.

Highland Tel. Co.  
1939 25 Feet pole  
nail. Small Aluminum.  
Add to Pg. 144

Next is another page to add - 145:b. More nails were found for Iowa/Nebraska Light & Power so a separate page for this set was added. That also means that on page 95 the numbers 701-704 should be white outed and a tag put in 701 noting the name and a note to SEE SET. Also the photos in blocks 701-704 should be eliminated with a white sheet of paper with a note in block 701 showing the name and a note to SEE SET. I know this is added work, but it makes it more manageable as new nails are added to the set created.

All Missouri Public Service. Large Aluminum. All Hand stamped. Add to Pg. 89.

---

Varieties of Hawaiian Elect. small copper Hubbards.  
1956 45' nail and a 1959/60 40' nail. Hand  
Stamped. Add to Pg. 61.

Large Aluminum Hubbard "City Of Salem" listed as #392 on Pg. 80 and shown on  
Pg. 85 as #392 has been found in Salem, Missouri (Thanks to Tim Sansoucie #1194  
for that info.)

---

EMPCO 25. Small copper (Millaca, MN) will be put in box 190. This  
is a little out of order, but I would have to re-do the entire page as  
well as the index, so it will go into box 190 on Pg. 51 and in the  
index as 190 on Pg. 42. Thanks to Bill McClellan for sending this  
photo.

**ERROR!** My error in listing the Knoxville Power and Light nails. They exist only as  
1" copper but are listed in both the 1 1/4 and 1" copper section. Please delete #26,  
#27 and #28 on Pg. 30 as well as the listing for as #26, #27 and #28 on Pg. 29.  
My thanks to Bill McClellan for pointing out this error.

Location for #685 Greenfield Power & Light Pg. 95 is Greenfield, IN (Thanks B.  
McClellan

Replacement for Page 166 (update/nails added)

Union Electric Power Co. (St. Louis, MO)

This small aluminum EMP is from Millaca, MN and goes with the two small copper Hubbard's (#193 and #194) shown on Pg. 51. They show EMP Co. whereas this aluminum nail shows EMP Corp. The are put in the "E" section because they are presented as E.M.P but should represent MEP, Millaca Elect. Power. Please list this aluminum nail as #671 on Pg, 95 and show the nail as #671 on Pg. 107. Thanks to Bill McClellan for info and photo.

---

Eliminate #788, the small aluminum Hubbard shown on Pg. 111 and listed on Pg. 97. It is also correctly shown as #743 and listed on Pg. 96. The No at the top I believe represents Number and not North. So the user is the KY and WVA Power Co.

---

Please delete this nail from Pg. 150.  
It is shown in the middle of the top row.  
It is made from steel and not aluminum.  
The steel nail is shown on Pg. 180.

---

Add these three Puerto Rican nails to the small aluminum section. The PRWRA 56 and 57 (PR. Water Resources Authority) should be #829 and #832 on Pg. 99, with photos added to Pg. 112. The PREPA (PR. Elect. Power Authority) should be #835 on Pg. 99 and photo added to Pg. 112. These are not in strict order but rather than change the entire page I selected vacant spots. Thanks to Bill McClellan for pointing these out.

Insert PU.Co. as #836 on Pg. 99 and the photo of that nail on Pg. 112. This is listed by Wiswell as Pasco Utility Dist. (WA) I believe this is in error after speaking with representatives of that district. The PUD nails may be from FL, but this PUCo nail is different. Any info would be helpful. Thanks to Bill McClellan for the scan.

---

On page 117 the numbers 27-34 are probable not date nails but sequence numbering nails, with the exception of the second 32. This was pointed out by Bill McClellan citing the back stamps on his, which date the nails to a much later time frame than the 27-34 nails indicate. Thanks Bill.

---

These three nails were used by the Bangor & Aroostook Railroad of Maine in their telephone/telegraph poles. They are all small aluminum and the 1954 should be listed as #532 on page 91 and shown as #532 on page 102. The 1955 is already in #530 but now has a user ID. The date 1956 should be placed in page 119.

These two small copper Hubbard's are part of the Central Maine Power Co. and rather than reworking the entire page I have added them as #164 for the 1935 (hs 5) and #166 for the 1935 factory nail. The photos should be added on Page 50 and the notation should be added to Page 41. A little out of order but should be easy to spot.

---

The small alum. Hubbard #873 listed on Pg. 100 and shown on Pg. 114 has been identified as Southwest Telephone Co. The nails were found in Arkansas and in the town of Rector, AK. Thanks to B. McClellan for that information

At this time both of these large aluminum Hubbard's have an unknown user. Please put WL&W in #468 on Page 87 and note it on Page 82. Put BPW in #362 on Page 84 and the notation on Page 80. A little out of order but saves reworking the entire page.

Thanks to B. McClellan for sending scans.

Just in: Both of these aluminum Hubbard nails are from Winnsboro, SC - Thanks to Dave Parmalee for this information.

---

### Tampa Electric (FL)

I received an email from William "Byrne" Mollohan (11/3/17) of Tampa, FL. He is a dedicated collector of the Tampa Electric Co. small aluminum Hubbard nails and supplied this additional information about the set. His friend Justin McKeon also helped find the additional information. Some of William and Justin's finds include:

*"I have other unique finds of TECO's like a proto-type "nail and washer" combo that seems to have been used only for 1 year in 1964."*

*The use of Hubbard nails "spans from 1930 to 1990, which I have every year of except for the 1944. I'm working on its location believe it or not with the help of TECO, they are actually sending me a book that may help me pin down the work locations in the 40's so maybe given enough time I will find it. The way TECO has been replacing poles over the last 7 years or so I worry a little, but if anything I'm vigilant! So you know just the base collection by year and pole height alone is over 350 nails and that's not counting variances like the "Large Faced TECO's, unmarked blanks, over-stamps, code marked nails for Gas and Underground Electric and die stamp variances like the 1980 nails with a small 8 just to name a few. Justin and I are also finding variances in other decades to which will probably push the TECO upwards of a 1000+ itself."*

William has not mounted any of the nails yet, but hopefully some photos will come when he has the chance to do that.....thanks Willam and Justin.

---

Another Western Maryland Railway Co. Hubbard has been discovered. This one has a hand stamped (19) 52 on it. Please enter is as #42 in the Large Copper Hubbard section on Pg. 29 and add the photo as # 42 on Pg. 31

Three new nails for the TECO (Tampa Elect. Co.) small Hubbard nail set. One, a 1933 30FT nail fits the pattern of the rest of the known nails. The “C” and “4” are new finds. Both are in the book but not attributed to TECO. So add that info to the “C” listing on Pg. 91 and the 4 shown on Pg. 116. Thanks to Byrne Mollohan, Tampa for the photos and information. These are the small aluminum Hubbard’s. In an email from TECO I was told the C and 4 represent Class and Size of pole.

---

Three more to add to TECO from Byrne and his friend Justin. A 1943 55FT, 1932 35FT, and 1935 35FT. All three are small aluminum Add to set on Pg. 164

Small aluminum Hubbard nails marked #821 and 822 listed on Pg. 98 and shown on Pg. 112 have been identified as belonging to Pacific Power and Light Co. which serviced Oregon and parts of No. California and two city areas of Washington State. This identification was supplied by Bill McClellan via Bill Bunch. Thanks.

---

1952 40' Small Copper from Benton County Public Utility District (WA) Should be added to list as #81 on Pg. 39 and in space 81 on Pg. 47.

---

Scott Weed (TDNCA #1405) has said he believes the Small Copper Hubbard GE1929 should be listed as being used by the Galveston-Houston Electric Railway. He reports on the three nails he knows about: "I know where 3 of the nails were pulled. The one I pulled was in Downtown Houston, another was pulled in the Medical Center which is directly in line with Galveston...and one was pulled in Galveston from a large pole that was in a parking lot on the ground being used as a parking structure. When I pull up the map of the RR all 3 nails seem to aligned with the RR." Since this makes more sense than Gulf Oil I am changing to user to Galveston-Houston Electric Railway unless new material refutes that. Please change this on #205 of page 42. - The photo of this nail is shown as #205 on Page 51.

---

My thanks to Bill McClellan for the following information on some 1" copper numbered nails shown on page #78 and listed on the following page. The small 100 shown is from Missouri Power & Light/Moberly, MO. The first 250 listed as Cumberland, PA nail was used by Potomac Edison. The next 250 shown, the smaller numbers is from Moberly, MO and was used by the Missouri Power & Light. The second 400 show was used by Potomac Edison and the 600 shown was also used by Potomac Edison. Please add the appropriate information on Page 79.

---

The small aluminum Hubbard marked ACCo38 and listed as unknown on Pg. 91 - shown on Pg. 102, is Atlantic Creosote 1938. Thanks to Bill McClellan. Please change listing on Pg. 91

Large Cast Bronze  
Number 55 and 54- 1"  
Nail used by CG&E  
Please add to Pg. 179  
Thanks Scott Weed.

These two small copper Hubbard nails are from the Union Gas & Electric Co. (Ohio) and are 1931 60FT and 1933 30FT nails. Thanks to Scott Weed (TDNCA 1405) for reporting these. Please add to the set shown on Page 76.

---

U.S Coast Guard 27 small copper Hubbard previously not shown. Add to Pg, 56 #351 and list on Pg. 46 #351. Thanks Scott Weed.

---

These two GTC (General Telephone Co.) small aluminum Hubbard's were pulled in the Tampa, FL area. Prior to this these nails were credited to Eastern Texas. Please correct this to read TX and FL. Thanks to Byrne Mollohan and Justin Mckeon for reporting these finds. please make the appropriate corrections to Pages 141, 142 and #690 on Pg. 95.

---

**CORRECTION TO BE MADE:** The Small Copper Hubbard's shown on Page 48 as numbers 116 through 120 are from Poplar Bluff, Missouri and not Poplar Bluff, Nebraska as incorrectly listed on Page 40 - numbers 116-120. (My Bad!!)

---

The user of the CBG.T.Co small aluminum Hubbard nails shown (R)is Coopersburg Tel. Co (PA) . Skip Kilpatrick got them at the 2019 Marceline show. Because of space constrictions they are slightly out of order when putting them in spaces #569 and #570 on Page. 103 in the book.

Usually I do not post hand stamped hubbards. But this small aluminum one is neatly done so will put it in space #818 on page 112. Skip Kilpatrick got this at the Marceline show and at the present time the user is unknown.

---

Added a Page 57b to make room for set of Consumer Public Power (NB) Please delete the two nails #174 and 175 on Pg. 41 and note this page. I have added the two nails that were here to the new page.

---

More additions for Consumer Public Power (NB). This time small aluminum nails. So please delete those shown on Page 105. That is number 621-625. Put note in #621 noting a full page of these nails. That page is number 123:b . I have added a copy of that page following this page. Thanks to Skip Kilpatrick for sending these photos. They are a little blurry and hopefully at some point we will have an upgrade.

---

A variety of the 2500 Lumen large aluminum large Hubbard (1 1/2") has been reported by Byrne Mollohan. This was from the Dunedin, FL area. Please add the note to #494 on Pg. 83 and put the photo in space #494 on Pg. 88.

---

# Consumer Public Power District (NB)

				
				
				
				
				
				

Two additions that should be added to Pg. 103. They are both Small Aluminum Hubbard's and both are CITY / FT. One is 1937 and the other is 1939. Put those in spot #565 and #566.

---

Here is a new find from Cal & Kyle Schaefer of Valley City, ND. It is a 1959 Large Copper Hubbard from Inter-Community Tel. Co. headquartered in Steele, ND. This year (2019) they were purchased by BEK Tel. At this time it is not known if there are other nails to add or if this is a factory sample (the nail is new and undriven) 1 1/4 x 1/4 copper. I know this is a little out of order but add this to #26 on Page 30 and list it #26 on page 29. (otherwise I would have to revise the entire pages!) Thanks to Byrne Mollohan for making me aware of this nail.

Three additions to the small copper Hubbard's contributed by Charles Sebesta. They are all unknown CITY nails with dates of 1930, 1935 and 1942. Please put them in the following boxes: The 1930 in #125, the 1935 in #127 and the 1942 in #130 all on Page 49 of the Hubbard book. The back stamps for the nails are 1930 (HH), 1935 (H4) and the 1942 Hubbard Company.

From Florida Byrne Mollohan has found a nail that without seeing the back stamp or lack thereof would certainly look like a 1940 small aluminum Hubbard. But Byrne tells me “The Nail has a smooth back with just a mold line which was made after 1940. The nail most likely dates to the 1960's period. “ It sure fooled me to see this one, but he makes a valid point and thus far, even though there is a factory stamped 19, no Hubbard has yet found used by the Orlando Utilities Commission that has been used as a date nail, only used as a height nail. Thanks Byrne. Please add to Page 154. The question of whether OUC used nails as dates is still a question being looked at.

Another find by Byrne Mollohan. Another variation of the 2,500 Lumen large aluminum Hubbard. This makes five varieties of this particular nail. Please place in box #491 on page 88. I know this splits these 2,500 Lumen nails up to #491, 494, 496-498, but it is easier to to that then it is to create a new pageS! Thanks Byrne.

Dave Parmalee reports two TN Public Service Small Copper Hubbard overstrikes. They are 1933 over 31. - One with rounded threes and one with flat threes. Please put with set on Pg. 75

No page to put these as I did not include back stamps in my book, but here are a few very odd back stamps, four of which are sent by Byrne Mollohan. Thanks.

**Correction:** The three KPL Large Hubbard's shown at the bottom of Page 30 should be deleted and placed on Page 53. The 1927 as #242, 1929 #244 and 1930 as #245.

Also delete the reference #26-28 on Pg. 29 and add reference to Pg. 43. In box #26 on Pg. 30 please insert this nail. and on Pg. 29 please note that #26 is Inter-Community Tel.Co. 1959 Steel City, ND.

Small copper 1943 (Hand stamped 3) Ohio Public Service Co. Please add to the proper box on Page. 71.

**Another correction:** Delete #12 City of Shelby from Large Copper Pg. 29 and Pg. 30. Dave Parmalee points out this has only been found as a Small Copper and is already shown in that section as #150 on Pg . 49.

On the two pages following this you will see addendum small aluminum Hubbard's for the Oak Ridge (TN) collection. Please insert these pages as 153-c and 153-d. There are many variations of the hand stamps and I thank Dave Parmalee for sending the photos and relevant information. These notes correspond with the horizontal rows of each page. My thanks again to Dave.

ROW 1: HOR.4; EXTRA HOR.6; DOUBLE 8; SMALL DATE; HOR.0.

ROW 2: HOR.2; DOUBLE 1; LARGE DATE; DOUBLE 7; DOUBLE 3.

ROW 3: DOUBLE 7 & 3; DOUBLE 7; 74 ON BLANK, DOUBLE 7; 5 (1975) ON BLANK.

# Oak Ridge (TN) - (cont'd)

Thanks to Dave Parmalee for recent photos

153-c

# Oak Ridge (TN) - (cont'd)

Thanks to Dave Parmalee for recent photos

153-d

Some recent corrections from Bill Bunch. - Thanks Bill:

1. Change the small copper Hubbard listings on Pg. 39 Numbers #91 and #92 to read: Citizens Tel. Co. They were found in Terre Haute, IN.
  2. Change the small aluminum #776 on Pg. 97 to read Missouri Service. They were found in Tarkio, MO.
  3. Change the large aluminum #430 on Pg. 81 to read Missouri Service. They are found in Tarkio, MO.
  4. Change the large aluminum #402 DSB. These were found in Dearborn, MI and possibly represent Dearborn Sewer Board (?)
- 

Two more varieties of the Elizabethan (TN) small aluminum nails found by D. Parmalee. Please add to page 138.

---

Here is a hand stamped 1938 Small aluminum hubbard. User is unknown and it is marked "CW". If anyone knows WITH CERTAINTY who the user was, please let me know. Put the note for this on pg. 94 #651 and the photo on pg. 106 in box #651.

---

Well, here is another one reported by Byrne Mollohan. An unreported large copper Hubbard with B.T.Co (Bell Telephone at the top and P.C.L&p Co. on the bottom, with a large "J" in the middle. Byrne tells me it was a pole jointly owned by Bell Telephone and Penn. Central Light & Power Co. The photo is not as clear as I would like as Byrne does not have this nail....yet. If he does get it I will add a clearer photo. Please put in spot #28 on page 30.

Here are some additions to the Hawaiian Electric nails. These are all copper. Some are large copper and some are small. The large ones should be put on page 37 and the small ones on page 61 - you will have to start a new page (61:a) for the ones that will not fit on page 61. My thanks to Byrne Mollohan for sending in these great photos and for Bill Bunch who sent the nails to Byrne. The large nails are in the top row and the small nails are in the second row.

The following page shows a page that will be added to the book in the section for Small; Aluminum Hubbard's. Please insert this page after Page 148. They are from the Maui Elect. Co. (Hawaii). They originally belonged to Scott Weed who got them from a relative working for the utility. The photos of them are from Skip Kilpatrick and the nails were brought to my attention by Byrne Mohollan. My thanks to all. I usually shy away from putting hand stamped nails in the book. But in this case there is enough supporting evidence to verify that they are indeed from Maui Electric.

Maui Electric Co. (Hawaii)

				
				
				
		148:b		

As mentioned in the book, I have not included hand stamped Hubbards unless they can be authenticated. Here is a collaborative effort from Byrne Mollohan and Dave Parmalee They are 1" small aluminum hand stamped from Bessemer, AL. Probably more years out there but shown are 51, 53 and 55. Please add to Pg. 181 and my thanks to both Byrne and Dave.

Here is a new find of a variety of the small copper (1") NP&L Hubbard. The nail on the left is the new variety noted. Please add this as #290 on Page 44 and put the photo in the box for #290 on Page 54. Thanks to Bill Bunch for reporting this variety.

I was made aware by Bill Bunch that the small Copper Hubbards (1 inch head) used by the Potomac Electric Company are all 3 1/2 inches in length!! They did not use all letters and their use was staggered chronologically as they used date nails for some time frames and then switched back to letters. Thanks Bill.

Here is a very early height Hubbard used by the Duquesne Light Co. Pittsburgh, PA. There may be more heights out there? If any one has any of these oldies please send photos. I have put this with the other Duquesne height nails on Page 136.

1946 Union Electric Power Co. (St., Louis, MO) This nail reported by Byrne Mollohan. It is a variety of the first nail known by them. The date on both is hand stamped, one with just the 46 and this one with the 19 and the 46. Please put in page 166 - Thanks Byrne.

---

This information is from John Bergmeier (TDNCA 1031) who recently visited Nebraska on vacation. The hand stamped small Hubbard nails numbered #580-582 and shown on page 104 and listed on page 92 are found in Ellis and Harbine, Nebraska and were used by the Fairbury Power Co. (NE). So this new information should be added to the text on page 92. Thanks John.

---

Another from John Bergmeier. This small copper is from Nebraska. Marked IO CITY. Please add this to the text as #140 Page 40 and as a photo for #140 on Page 49.

---

Here is a previously un shown small copper. It is reported by Byrne Mollohan, The TBG&SO LIGHT CO. came from the Toledo, Bowling Green and Southern Light Co. This company also owned a Traction railway and supplied power for that as well. This is an old Hubbard nail as the company ceased to exist in 1930. Please enter the info. on page 45 as #326. Also show the nail in box #326 on page 55. Thanks Byrne and Dave Parmalee who first spotted this nail.

---

As you know, I have shied away from listing or mentioning the various back stamps used on the Hubbard nails for several reasons. But here are two examples of the strange ones found. The small copper COMPANY/COMPANY is on the back of a Duquesne nail and the one on the back of the large aluminum is a City Light & Power Ft nail. Thanks to Byrne Mollohan for sending in the photo of the latter.

Oak Ridge City (TN) set of nails. (Mollohan/Parmalee Collection -Missing 1983  
Please insert into Hubbard Book as Page 154:b

Here are two nails to be added.  
The large alum. MPS 49 40 photo should be added to the rest of those shown on Pg. 89. The large copper MPS 1958 55" nail is unreported so a listing should be added to #38 on page 29, with the photo added in box #38 on page 31. Thanks go Byrne Mollohan and Bill Bunch for these.

---

Well Byrne Mollohan does it again! He found an unreported large aluminum Hubbard from the Northeast Florida Telephone Co. (1955-1996) near Jasper, FL. Unreported before. They also used a bronze (NEFT) washer and blank bronze Premax nail in later years. Please add notation to Pg. 81 under #235 and as a photo in square #435 on Page. 86.

---

A variation of the Iowa Southern Utilities small aluminum Hubbard has been found and reported by Byrne Mollohan. It has a smaller letters and a ring shank so is probably more recent than others? Thanks Byrne. Please add to page 146.

---
